Emilio Morasso

Le rivoluzioni industriali e l'imperialismo A. Duè,1998

Rivoluzioni industriali Jérémy Rocteur,2023-02-23 La rivoluzione industriale è stata un periodo di modernizzazione iniziato in Gran Bretagna e poi diffusosi nel resto d'Europa. Durante questo periodo, molti Paesi del mondo occidentale si sono trasformati da prevalentemente agricoli a più meccanizzati, accelerando la crescita demografica e provocando cambiamenti economici senza precedenti. In soli 50 minuti, scoprirete come questa rivoluzione ha plasmato l'Europa per i secoli a venire e capirete il suo profondo impatto sulla società moderna. Questo libro, semplice e istruttivo, offre una trattazione approfondita delle principali invenzioni della Rivoluzione industriale, tra cui il motore a vapore e il motore a combustione interna. Include inoltre una biografia completa dei protagonisti, tra cui James Watt e Thomas Edison, una preziosa introduzione al contesto economico e una valutazione dell'impatto della Rivoluzione industriale, fornendo tutte le informazioni essenziali su questo periodo cruciale che ha plasmato la società moderna.

Il disegno. L'architettura del moderno. Dalla rivoluzione industriale a oggi. Per il triennio Emilio Morasso,2003

The Fourth Industrial Revolution Klaus Schwab,2017-01-03 World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine “smart factories” in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these

changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

Dalla Rivoluzione scientifica alla Rivoluzione industriale Angelo Calemme, 2022-03-03T00:00:00+01:00 Nel dibattito contemporaneo sembra essere ormai consolidatasi l'idea che, in merito al suo sviluppo, la tecnologia scientifica sia debitrice al capitalismo. A partire soprattutto dalla fine del primo trentennio del XIX secolo, l'evoluzione scientifico-tecnica è andata infatti sempre più caratterizzandosi non come mezzo di emancipazione dell'uomo, ma, al contrario, come strumento privilegiato del capitale per il trasferimento, la marginalizzazione e la relativa sostituzione del lavoro vivo nei processi di produzione. Questa situazione non è un risultato storico necessario, ma - come dimostrava Marx tutte le volte che ha ricostruito la selezione delle tecnologie scientifiche - è il frutto della combinazione di logiche interne ed esterne allo sviluppo delle Rivoluzioni scientifica e industriale. Con sguardo attento anche alla Critica dell'economia politica, questo volume vuole restituire la parola alla marxiana Storia critica della tecnologia fornendo al lettore anche meno specializzato quegli strumenti teorici indispensabili per pensare futuri scenari disastrosi, o viceversa razionalmente funzionali, per il ricambio organico tra uomo e natura.

La terza rivoluzione industriale Jeremy Rifkin, 2011-10-25 La nostra civiltà, quindi, deve scegliere se continuare sulla strada che l'ha portata a un passo dal baratro, o provare a imboccarne coraggiosamente un'altra. Solo quando cominceremo a pensarci come un'estesa famiglia globale (...) saremo in grado di salvare la nostra comune biosfera e rinnovare il pianeta per le future generazioni».

Le rivoluzioni tradite? Ágnes Heller, 2019-10-03T00:00:00+02:00 Tutte le rivoluzioni sono destinate a essere tradite. Gli esiti, infatti, non sempre sono stati all'altezza degli ideali di coloro che vi avevano creduto e partecipato. Seguendo il filo di queste affermazioni, Ágnes Heller divide le rivoluzioni in due categorie: quelle che "scoppiano", come ad esempio la Rivoluzione Francese, e quelle che "hanno luogo" nel corso del tempo, come la Rivoluzione scientifica del Sedicesimo secolo. A prescindere dalla modalità con cui hanno avuto inizio, tutte le rivoluzioni dell'epoca moderna hanno teso a obiettivi precisi. Tuttavia, nessuna è riuscita a realizzarli completamente. Che cosa rende dunque le rivoluzioni irrinunciabili?

Intelligenza artificiale: la quarta rivoluzione industriale Vasil Teigens, Peter Skalfist, Daniel Mikelsten, La quarta rivoluzione industriale rappresenta un cambiamento fondamentale nel modo in cui viviamo, lavoriamo e ci relazioniamo l'un l'altro. È un nuovo capitolo dello sviluppo umano, reso possibile da straordinari progressi tecnologici commisurati a quelli della prima, seconda e terza rivoluzione industriale. Questi progressi stanno fondendo i mondi fisico, digitale e biologico in modi che creano sia enormi promesse che potenziali pericoli. La velocità, l'ampiezza e la profondità di questa rivoluzione ci stanno costringendo a ripensare il modo in cui i paesi si sviluppano, come le organizzazioni creano valore e persino cosa

significa essere umani. L'intelligenza artificiale oggi è propriamente nota come AI stretta (o AI debole), in quanto è progettata per svolgere un compito ristretto (ad esempio solo il riconoscimento facciale o solo ricerche su Internet o solo alla guida di un'auto). Tuttavia, l'obiettivo a lungo termine di molti ricercatori è quello di creare un'IA generale (AGI o AI forte). Mentre l'IA ristretta può superare gli umani in qualunque sia il loro compito specifico, come giocare a scacchi o risolvere equazioni, l'AGI supererebbe gli umani in quasi tutti i compiti cognitivi.

Il paesaggio italiano della rivoluzione industriale Elisa Mariani Travi, Leonardo Mariani Travi, 1979

Rivoluzione industriale Fouad Sabry, 2024-02-12 Cos'è la Rivoluzione Industriale La Rivoluzione Industriale, conosciuta anche come Prima Rivoluzione Industriale, è stato un periodo di transizione globale dell'economia umana verso sistemi più diffusi, efficienti e stabili. processi produttivi che seguirono la Rivoluzione Agricola, a partire dalla Gran Bretagna e diffondendosi nell'Europa continentale e negli Stati Uniti, avvenuta nel periodo che va dal 1760 circa al 1820-1840 circa. Questa transizione includeva il passaggio dai metodi di produzione manuale alle macchine; nuovi processi di lavorazione chimica e di produzione del ferro; il crescente utilizzo dell'energia idrica e del vapore; lo sviluppo delle macchine utensili; e l'ascesa del sistema di fabbrica meccanizzato. La produzione aumentò notevolmente e il risultato fu un aumento senza precedenti della popolazione e del tasso di crescita della popolazione. L'industria tessile è stata la prima a utilizzare metodi di produzione moderni e il tessile è diventato l'industria dominante in termini di occupazione, valore della produzione e capitale investito. La rivoluzione industriale e l'Italia Giorgio Mori,1961

4 punto 0 Massimo Temporelli,Francesco Colorni,Bernardo Gamucci,2017-11-15T00:00:00+01:00 Un libro per muovere i primi passi nel mondo della Quarta rivoluzione industriale, un mondo in cui robot, intelligenze artificiali e tecnologie per la manifattura digitale cambieranno per sempre il nostro modo di progettare, produrre e acquistare prodotti e servizi. La prima caratteristica di questa rivoluzione è la globalizzazione: per la prima volta nella storia, una trasformazione industriale sta avvenendo in contemporanea su scala mondiale. Il secondo aspetto chiave è la parola ecosistema: a differenza delle prime tre rivoluzioni industriali (macchina a vapore, elettricità, computer) in questi anni non sono state inventate nuove tecnologie o nuove macchine, ma si è capito come tenere insieme con uno stesso linguaggio (il bit) diverse piattaforme tecnologiche. Se la rivoluzione in atto porterà a termine le trasformazioni promesse, tra vent'anni guarderemo alla società di oggi come oggi guardiamo alla società dell'Ottocento.
