[Black Hole Blues and Other Songs from Outer Space](#) Janna Levin, 2017-04-18 The authoritative story of Rainer Weiss, Barry Barish, and Kip Thorne's Nobel Prize-winning discovery of gravitational waves—by an eminent theoretical astrophysicist and award-winning writer. With A New Preface In 1916, Einstein predicted the presence of gravitational waves. One century later, we are recording the first sounds from space, evidence of the waves' existence caused by the collision of two black holes. An authoritative account of the headline-making discovery by theoretical astrophysicist and award-winning writer Janna Levin, *Black Hole Blues and Other Songs from Outer Space* recounts the fascinating story of the obsessions, aspirations, and trials of the scientists who embarked on an arduous fifty-year endeavor to capture these elusive waves. Five decades after the experiment was dreamed up, the team races to intercept a wisp of sound with two colossal machines, hoping to succeed in time for the centenary of Einstein's most radical idea. With unprecedented access to the surprises, disappointments, achievements, and risks in this remarkable story, Janna Levin's absorbing account offers a portrait of modern science that is unlike anything we've seen before.

Einstein's Monsters: The Life and Times of Black Holes Chris Impey, 2018-11-13 “[A] skillfully told history of the quest to find black holes.” —Manjit Kumar, *Financial Times* Black holes are the best-known and least-understood objects in the universe. In *Einstein's Monsters*, distinguished astronomer Chris Impey takes readers on a vivid tour of these enigmatic giants. He weaves a fascinating tale out of the fiendishly complex math of black holes and the colorful history of their discovery. Impey blends this history with a poignant account of the phenomena scientists have witnessed while observing black holes: stars swarming like bees around the center of our galaxy; black holes performing gravitational waltzes with visible stars; the cymbal clash of two black holes colliding, releasing ripples in space time. Clear, compelling, and profound, *Einstein's Monsters* reveals how our comprehension of black holes is intrinsically linked to how we make sense of the universe and our place within it.

Infinite Powers Steven Strogatz, 2019 This is the captivating story of mathematics' greatest ever idea: calculus. Without it, there would be no computers, no microwave ovens, no GPS, and no space travel. But before it gave modern man almost

infinite powers, calculus was behind centuries of controversy, competition, and even death. Taking us on a thrilling journey through three millennia, professor Steven Strogatz charts the development of this seminal achievement from the days of Aristotle to today's million-dollar reward that awaits whoever cracks Reimann's hypothesis. Filled with idiosyncratic characters from Pythagoras to Euler, Infinite Powers is a compelling human drama that reveals the legacy of calculus on nearly every aspect of modern civilization, including science, politics, ethics, philosophy, and much besides.

Championing Science Roger D. Aines, Amy L. Aines, 2019-01-22 Championing Science shows scientists how to persuasively communicate complex scientific ideas to decision makers in government, industry, and education. This comprehensive guide provides real-world strategies to help scientists develop the essential communication, influence, and relationship-building skills needed to motivate nonexperts to understand and support their science. Instruction, interviews, and examples demonstrate how inspiring decision makers to act requires scientists to extract the essence of their work, craft clear messages, simplify visuals, bridge paradigm gaps, and tell compelling narratives. The authors bring these principles to life in the accounts of science champions such as Robert Millikan, Vannevar Bush, scientists at Caltech and MIT, and others. With Championing Science, scientists will learn how to use these vital skills to make an impact.

The Magicians Marcus Chown, 2020-02-18 The spellbinding stories of the scientists whose eureka! breakthroughs in modern physics reveal science's astonishing predictive power. 'An excellent popular science book.' DARA Ó BRIAIN 'A thoroughly informative and entertaining read.' ANNA BURNS, Booker Prize-winning author of Milkman 'One of the best-written books about physics I have ever come across.' POPULAR SCIENCE 'Highly entertaining and accessible.' IRISH TIMES 'Fascinating, life enhancing entertainment.' PROSPECT 'Thoroughly enjoyable . . . Chown has done it again.' BBC SKY AT NIGHT The Magicians takes us on a breathtaking, mind-altering tour of the eureka! moments of modern physics. Charting the spellbinding stories of the scientists who predicted and discovered the existence of unknown planets, black holes, invisible force fields, ripples in the fabric of space-time, unsuspected subatomic particles and even antimatter, Marcus Chown reveals science's greatest mystery: its astonishing predictive power.

Interference David Nolte, 2023-07-27 Ever wonder why soap bubbles become invisible right before they pop? Or why lenses are so blue they look purple? How is it possible to image black holes at the heart of distant galaxies? The answer to all these questions is Interference. This book tells the story of the science of optical interferometry - mankind's most sensitive form of measurement - and of the scientists who tamed light to make outstanding discoveries, from lasers and holograms to astronomy and quantum physics. In the past several years, interferometry has been used to discover exoplanets orbiting distant stars, to take the first image of a black hole, to detect the first gravitational waves and to create the first programmable quantum computer. This list of achievements points to the fertile and active field of interferometry for which this book provides a convenient and up - to - date guide for a wide audience interested in the science of light.

Black Hole Survival Guide Janna Levin,2022-03-15 From the acclaimed author of *Black Hole Blues and Other Songs from Outer Space*—an authoritative and accessible guide to the most alluring and challenging phenomena of contemporary science. [Levin will] take you on a safe black hole trip, an exciting travel story enjoyed from your chair’s event horizon.” —Boston Globe Through her writing, astrophysicist Janna Levin has focused on making the science she studies not just comprehensible but also, and perhaps more important, intriguing to the nonscientist. In this book, she helps us to understand and find delight in the black hole—perhaps the most opaque theoretical construct ever imagined by physicists—illustrated with original artwork by American painter and photographer Lia Halloran. Levin takes us on an evocative exploration of black holes, provoking us to imagine the visceral experience of a black hole encounter. She reveals the influence of black holes as they populate the universe, sculpt galaxies, and even infuse the whole expanse of reality that we inhabit. Lively, engaging, and utterly unique, *Black Hole Survival Guide* is not just informative—it is, as well, a wonderful read from first to last.

Searching for the Oldest Stars Anna Frebel,2019-08-27 A leading astronomer takes readers behind the scenes of the thrilling science of stellar archaeology and explains how sections of the night sky are excavated in the hunt for extremely rare, 13-billion-year-old relic stars and how this quest reveals tantalizing new details about the origins and evolution of the cosmos.

100 Years of Chronogeometrodynamics: The Status of the Einstein’s Theory of Gravitation in Its Centennial Year Lorenzo Iorio,Elias C. The Aesthetics of Scientific Data Representation Lotte Philipsen,Rikke Schmidt Kjærgaard,2017-08-22 How can cartoon images aid in understanding bacterial biological processes? What prompts physicists to blur their images before showing them to biologists? Considering that the astronomer’s data consists solely of invisible, electric impulses, what is the difference between representing outer space as images, graphs, or sound? How does a work of contemporary art differ from a scientific image if we cannot visually distinguish between the two? How do aesthetics, art, and design influence scientific visualization and vice versa? This volume asks critically important questions about scientific data representation and provides significant insights to a field that is interdisciplinary in its very core. The authors investigate scientific data representation through the joint optics of the humanities and natural sciences. The volume particularly appeals to scholars in visual and aesthetic studies, data visualization, scientific illustration, experience culture, information design, and science communication.

Yogaha Dr.Shelley Evans PhD DNM,2018-04-29 YogAhas gift is to take you into ultra-dimensional awareness and help

you create the correct environment for your own DNA to become your return to full consciousness. Bliss is the fastest way to wellness on every level. Every Aha moment has its bliss portal where do you wish to explore? Awareness is the secret of transforming yoga into an aha moment. Mind yoga that is. Are you ready to stretch you mind? Consciousness is both receiver and cultivator of feeling and experience, ... We do not have consciousness; rather Consciousness has us! Are you ready for adventure in the field of consciousness? Awareness effects keener intuition by training our brain to develop neurological pathways for gratitude, logic and reasoning. Are you ready to lock in the frequency of happiness, relaxation and inspiration to find and live your purpose? Are you ready to share your bliss and fast-track the lifestyle you want, Naturally? Yog Aha divulges the secret to generating sacred space by sharing pure principle. The yoking of your awareness with the field of consciousness is suspended as stillness to attain liberation. Liberation provides the specific frequency for the conscious union of your choosing. This is freedom. What vibration do you want to be a match for?

A Madman Dreams of Turing Machines Janna Levin, 2009-02-19 Kurt Gödel's Incompleteness Theorems sent shivers through Vienna's intellectual circles and directly challenged Ludwig Wittgenstein's dominant philosophy. Alan Turing's mathematical genius helped him break the Nazi Enigma Code during WWII. Though they never met, their lives strangely mirrored one another—both were brilliant, and both met with tragic ends. Here, a mysterious narrator intertwines these parallel lives into a double helix of genius and anguish, wonderfully capturing not only two radiant, fragile minds but also the zeitgeist of the era.

Probable Impossibilities Alan Lightman, 2022-04-19 The acclaimed author of Einstein's Dreams tackles big questions like the origin of the universe and the nature of consciousness ... in an entertaining and easily digestible way" (Wall Street Journal) with a collection of meditative essays on the possibilities—and impossibilities—of nothingness and infinity, and how our place in the cosmos falls somewhere in between. Can space be divided into smaller and smaller units, ad infinitum? Does space extend to larger and larger regions, on and on to infinity? Is consciousness reducible to the material brain and its neurons? What was the origin of life, and can biologists create life from scratch in the lab? Physicist and novelist Alan Lightman, whom The Washington Post has called "the poet laureate of science writers," explores these questions and more—from the anatomy of a smile to the capriciousness of memory to the specialness of life in the universe to what came before the Big Bang. Probable Impossibilities is a deeply engaged consideration of what we know of the universe, of life and the mind, and of things vastly larger and smaller than ourselves.

An Arts Therapeutic Approach to Maternal Holding Ariel Moy, 2021-08-08 Little research has explored the everyday, simple and long-term experience of maternal holding, particularly after the first year of a child's life. The research that has

been undertaken commonly examines holding through the lens of attachment with a focus on the impact of holding upon the child. Employing an arts-based collaborative inquiry approach, participants' stories of holding, as well as the author's own, convey the significant maternal experiences of holding their children over individual arts therapeutic sessions. Optimal moments of holding included strange, powerful and meaningful experiences of expansion into self-in-representation. Attention is drawn to the ways in which holding can alert us to the current state of mother/child relationships; how we understand, story and structure those relationships; and the ways in which we can attend to holding in order to develop deeply satisfying experiences of a mother/child 'us'. *An Arts Therapeutic Approach to Maternal Holding* aims to draw attention to the intersubjective qualities of the mother/child relationship, explore why holding matters, and offer suggestions for therapeutic practice. This book is essential reading for therapeutic practitioners and those in allied health fields who work with mothers and children.

Our Ancestors Came from Outer Space Maurice Chatelain, 1979-03-01

Gravity's Kiss Harry Collins, 2017-01-27 A fascinating account, written in real time, of the unfolding of a scientific discovery: the first detection of gravitational waves.

Our Universe Jo Dunkley, 2019-04-08 A BBC Sky at Night Best Astronomy and Space Book of the Year "[A] luminous guide to the cosmos...Jo Dunkley swoops from Earth to the observable limits, then explores stellar life cycles, dark matter, cosmic evolution and the soup-to-nuts history of the Universe." —Nature "A grand tour of space and time, from our nearest planetary neighbors to the edge of the observable Universe...If you feel like refreshing your background knowledge...this little gem certainly won't disappoint." —Govert Schilling, BBC Sky at Night Most of us have heard of black holes and supernovas, galaxies and the Big Bang. But few understand more than the bare facts about the universe we call home. What is really out there? How did it all begin? Where are we going? Jo Dunkley begins in Earth's neighborhood, explaining the nature of the Solar System, the stars in our night sky, and the Milky Way. She traces the evolution of the universe from the Big Bang fourteen billion years ago, past the birth of the Sun and our planets, to today and beyond. She then explains cutting-edge debates about such perplexing phenomena as the accelerating expansion of the universe and the possibility that our universe is only one of many. *Our Universe* conveys with authority and grace the thrill of scientific discovery and a contagious enthusiasm for the endless wonders of space-time.

Sophie's World Jostein Gaarder, 2007-03-20 A page-turning novel that is also an exploration of the great philosophical concepts of Western thought, Jostein Gaarder's *Sophie's World* has fired the imagination of readers all over the world, with more than twenty million copies in print. One day fourteen-year-old Sophie Amundsen comes home from school to find in her mailbox two notes, with one question on each: Who are you? and Where does the world come from? From that irresistible beginning, Sophie becomes obsessed with questions that take her far beyond what she knows of her Norwegian village.

Through those letters, she enrolls in a kind of correspondence course, covering Socrates to Sartre, with a mysterious philosopher, while receiving letters addressed to another girl. Who is Hilde? And why does her mail keep turning up? To unravel this riddle, Sophie must use the philosophy she is learning—but the truth turns out to be far more complicated than she could have imagined.

Flipped Wendelin Van Draanen, 2003-05-13 A classic he-said-she-said romantic comedy! This updated anniversary edition offers story-behind-the-story revelations from author Wendelin Van Draanen. The first time she saw him, she flipped. The first time he saw her, he ran. That was the second grade, but not much has changed by the seventh. Juli says: “My Bryce. Still walking around with my first kiss.” He says: “It’s been six years of strategic avoidance and social discomfort.” But in the eighth grade everything gets turned upside down: just as Bryce is thinking that there’s maybe more to Juli than meets the eye, she’s thinking that he’s not quite all he seemed. This is a classic romantic comedy of errors told in alternating chapters by two fresh, funny voices. The updated anniversary edition contains 32 pages of extra backmatter: essays from Wendelin Van Draanen on her sources of inspiration, on the making of the movie of *Flipped*, on why she’ll never write a sequel, and a selection of the amazing fan mail she’s received. Awards and accolades for *Flipped*: SLJ Top 100 Children’s Novels of all time IRA-CBC Children’s Choice IRA Teacher’s Choice Honor winner, Judy Lopez Memorial Award/WNBA Winner of the California Young Reader Medal “We flipped over this fantastic book, its gutsy girl Juli and its wise, wonderful ending.” — The Chicago Tribune “Van Draanen has another winner in this eighth-grade ‘he-said, she-said’ romance. A fast, funny, egg-celent winner.” — SLJ, Starred review “With a charismatic leading lady kids will flip over, a compelling dynamic between the two narrators and a resonant ending, this novel is a great deal larger than the sum of its parts.” — Publishers Weekly, Starred review

The Kindness of Strangers Michael E. McCullough, 2020-07-21 A fine achievement.--Peter Singer, author of *The Life You Can Save* and *The Most Good You Can Do* A sweeping psychological history of human goodness -- from the foundations of evolution to the modern political and social challenges humanity is now facing. How did humans, a species of self-centered apes, come to care about others? Since Darwin, scientists have tried to answer this question using evolutionary theory. In *The Kindness of Strangers*, psychologist Michael E. McCullough shows why they have failed and offers a new explanation instead. From the moment nomadic humans first settled down until the aftermath of the Second World War, our species has confronted repeated crises that we could only survive by changing our behavior. As McCullough argues, these choices weren't enabled by an evolved moral sense, but with moral invention -- driven not by evolution's dictates but by reason. Today's challenges -- climate change, mass migration, nationalism -- are some of humanity's greatest yet. In revealing how past crises shaped the foundations of human concern, *The Kindness of Strangers* offers clues for how we can adapt our moral thinking to survive these challenges as well.
